

===== # aes-ni ransomware # =====

SORRY! Your files are encrypted.
File contents are encrypted with random key (AES-256 bit; ECB mode).
Random key is encrypted with RSA public key (2048 bit).

We STRONGLY RECOMMEND you NOT to use any "decryption tools".
These tools can damage your data, making recover IMPOSSIBLE.

Also we recommend you not to contact data recovery companies.
They will just contact us, buy the key and sell it to you at a higher price.

If you want to decrypt your files, you have to get RSA private key.
In order to get private key, write here:

0xc030@protonmail.ch

Also there is one fast way to contact us.
If you are familiar with Jabber, write us to JID: zoolo@darknet.nz (it is Jabber, not e-mail address!)
You can get Jabber account for example at <https://www.xmpp.jp/signup>

IMPORTANT: In some cases malware researchers can block our e-mails.
If you did not receive any answer on e-mail in 48 hours,
please do not panic and write to BitMsg (<https://bitmsg.me>) address:
BM-2cVgoJS8HPMkjzqDMVNAGg5TG3bb1TcfhN
or create topic on <https://www.bleepingcomputer.com/> and we will find you there.

Has 256 Bit Encryption Been Cracked Screen ->->->->
